3D PP Monofilament Demister & Coalescing Media

FE-DM-2598

Structured media for application-specific liquid-droplet capture and coalescence in gas streams.

Company reference	FE-DM-2598
Material	PP monofilament
Bulk density - supplier reference	83.5 kg/m3
Single-layer height / thickness	20 mm (+/-10%) - supplier reference
Monofilament diameter	0.98 mm - supplier reference
Porosity	96% - supplier reference
Finished size, layers and frame	To be confirmed for each order

Selection and quotation

Provide the application, gas and droplet composition, gas flow or face velocity, temperature, pressure, available space, installation/drainage direction, required separation result and quantity. Unknown items can be discussed during review.

Reference basis

Compiled by FiltEdge from supplier technical information and drawings. Values are reference data, not an independent test report or a guaranteed separation specification. Confirm the selected material, dimensions and configuration before ordering.
